The **INDOOR
SMOKER
CHALLENGE**

Holy smokes! Design an appliance for indoor smoking that fits on the counter, but breaks the mold of countertop appliance design.

The Challenge

Smoked meat is obviously delicious. Smoke added to just about anything—cheese, drinks and veggies—are 10x as delicious. But due to the annoying efficiency of smoke alarms, smoking food and beverages has been exiled to hot backyards and crowded bar-b-que joints for far too long.

First Build says it's time to free the smoker and bring it to the great indoors where its BFFs—the TV and the couch—reside.

Their team has developed technology to bring smart smoking indoors without triggering your smoke detector or upsetting the neighbors down the hall. The challenge, should you choose to accept it, is to make the smoker look as good as the food tastes. Will you design the countertop appliance the world has been waiting for?

Deliverables

1

Link to CAD document (we prefer Onshape for ease of sharing, but other file links work too)

2

Product renders in placed environment (callout bubbles recommended)

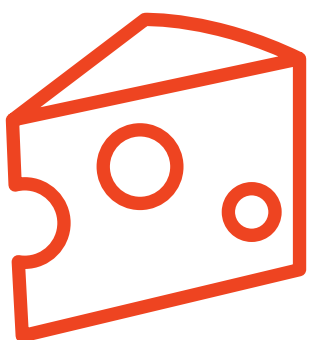

3

User Interface Detail Callouts

4

Product name and short description of the concept that answers:

- Who is the design for?
- What problem will it solve?

PRIZES

gold

\$3,000

silver

\$1,500

bronze

\$500
